Charts Summary with insights

1. Matplotlib

- Line Chart

Overall, sales fluctuated throughout the year but increased sharply from September, peaking in November at around **\$1.2 million**

- Bar chart

January has the highest average revenue, while November has the lowest, with revenue remaining relatively stable across the other months.

- **Histogram**

- **Box plot**

Box plot after filtering some quantity to view a proper box chart because with outliers applied the box plot is clustered in a place

The box plot shows that most quantities are relatively low, with several high-value outliers indicating some unusually large orders.

2. Seaborn

- **Count plot**

Thursday has the highest sales, while Friday has the lowest, with sales generally stronger from Monday to Thursday.

- **Violin plot**

Weekday and weekend expenses show similar distributions, with most expenses concentrated at lower values and a few higher-value expenses extending the range.

- **Heatmap**

Quantity and TotalPrice are strongly positively correlated (0.91), while UnitPrice shows almost no relationship to either variable.

- **Pair plot**

The pair plot shows that Quantity, UnitPrice, and TotalPrice are highly right-skewed, with most transactions having low values and a few extreme outliers, mainly in the Core Market segment.
